Product information, including uses/applications and source(s) of imports:

The subject product is a synthetic organic chemical that is used to make polyester powder coatings. Powder coatings are solids that are applied as powders by electrostatic means in a manner that avoids the use of volatile organic solvents. Volatile organic solvents are an environmental contaminant regulated in most States. Direct electrostatic application of powders also reduces material waste and air pollution caused by "blow-by" of liquid sprays. High-temperature curing of the applied coating provides good weather-resistance. The product is imported from Switzerland.

Technical comments:⁴

The Commission staff suggests that the article description on page 1 of this report be used in the proposed new heading in order to provide the correct HTS subheading reference and the correct spelling of the chemical name.

⁴ The Commission may express an opinion on the HTS classification of a product to facilitate consideration of the bill. However, by law, only the U.S. Customs Service is authorized to issue a binding ruling on this matter. The Commission believes that the U.S. Customs Service should be consulted prior to enactment of the bill.
